

Krushna Chandra Rout

Software Engineer

I am seeking a rewarding career with an esteemed organization that offers opportunities for advancement, challenges, and significant career growth. As a hardworking and enthusiastic individual, I thrive on experiencing new things and generating innovative ideas. With a keen interest in web development, I look forward to working in a competitive environment where I can develop my skills, learn new features, and contribute to the organization's success while advancing my career.

WORK EXPERIENCE

Software Engineer VIS NETWORKS Pvt. Ltd.

03/2021 - 10/2024

Bhubaneswar, India

VIS Empowers Businesses With The Best Communication & CX Management Solutions.

Tasks

- As a **MERN Stack Developer**, I have acquired substantial expertise through my work at a product-based company, leveraging technologies like ReactJS, Next.js, Node.js, MongoDB, MySQL, Firebase, Amazon Web Services, and Google Cloud Services. Some standout projects in my portfolio include RadiusPlay, Realm, Agent Script, Dynamic IVR Prompt Change, and CAIR (DRDO).
- Additionally, I have contributed to several smaller projects during my tenure.
- Additionally, I have collaborated with clients, including MEDC in Muscat, Oman, where I worked remotely and deployed projects. Notably, I developed the Dynamic IVR Prompt Change project independently as a full-stack developer.

Front End Developer (INTERNSHIP) PLEXOWARE TECHNOLOGY Pvt. Ltd.

01/2020 - 06/2020

Pondicherry, India

Tasks

- During my internship, I developed a real estate web application using React JS.

EDUCATION

Master in Computer Application Pondicherry University

PERSONAL PROJECTS

My Portfolio Website (2020)

- LINK:** <https://kc-portfolio-f3547.web.app/>
- Created using ReactJS & Bootstrap.

Bingo - Game (2023)

- I have created the multiplayer game using React, Next.js, Bootstrap 5, Socket.IO, Socket.IO-Client, and Node.js within a Next.js setup. The game allows players to participate by either creating a room session or joining using a room ID, with no maximum player limit.

Outcasts Community Web Application (2022)

- Client:** Outcasts Community
- LINK :** <https://outcastscommunity.com/>
- Main Website** is built using React and Next.js with React-Bootstrap, integrating the **Razorpay Payment Gateway**. It includes an **Admin Panel** developed with React and React-Bootstrap, while the backend and database utilize Node.js and MongoDB, hosted on an AWS EC2 server.
- Users can book event tickets directly from the event details page using the integrated **Razorpay Payment Gateway**. Upon successful registration, a confirmation email is sent by the server. The contact us page features Google Maps integration for location services.
- The admin panel oversees dynamic content management for the main website, including banner images, page covers, gallery images, events, bookings, enquiries, and contact messages.
- The entire project is deployed on an AWS EC2 server.

Blood Donation Application (2018)

- I have created the website using HTML, CSS, JavaScript, Python Flask, and MySQL. The site allows real-time access to blood donor and recipient details from a dynamic database. Users can register as donors or recipients, while admins manage records and view contact page feedback.
